

Train & Partners Architects, founded in 1990, practices architecture on a regional basis. We have assembled a staff with diverse interests and varied expertise. The collective experience of the partners and staff encompasses project types that include residential, commercial, and institutional.

We are problem solvers. We design without being constrained to a particular style or reference. We work on each project specifically for its client, program, and context. The underlying principles of our design work are the abstract qualities of rhythm, proportion, harmony, and balance. We utilize these principles to achieve visually cohesive and pleasing forms. The use of traditional architectural forms gives our projects a comprehension of intent and an elegance in reality. Enhancing our work is our love of materials, which we use in an easy, straightforward, honest manner. We engage 'green' principles in our building design, using eco-friendly materials and energy. It is our desire to create architecture which responds appropriately to the environment, creating a connection between built and natural form.
